

Astral-Pendant

Illuminate space and decorative it as decorative element

Dual-Light Source

This pendant features a dual lighting system that combines function and ambiance, using two types of light to illuminate both the task area and its surroundings.

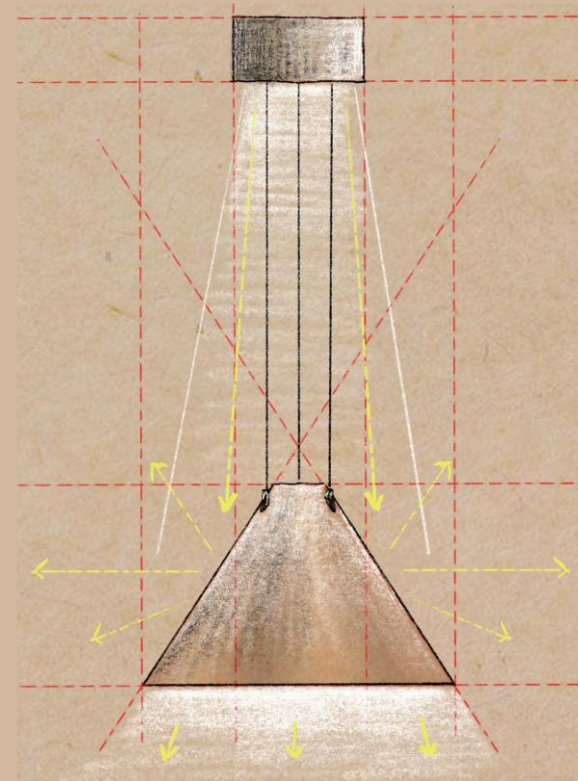

Ambient layer

To illuminate the luminaire as a decorative element for the interior space.

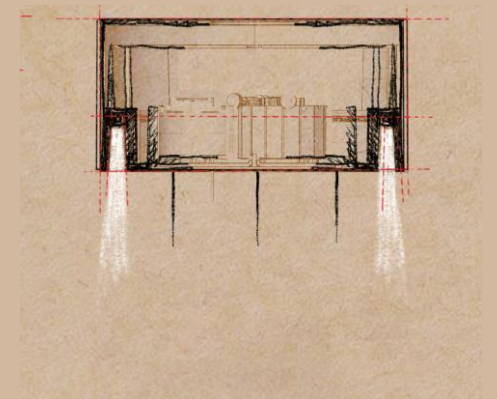

Accent| Task layer

5 types of distributions are available, depending on the height/ illuminated object

| 6 | Beam filter 12° 20° 25° 40° 50° 65° 20°x 60° |
| 7 | Honeycomb |

Design Intent

This luminaire is designed for projects where lighting is expected to shape atmosphere, not dominate it.

It offers designers flexibility—through beam control, mounting height, and finish options—while maintaining a consistent lighting philosophy: **clarity below, softness above, and harmony in between.**

Public Space

In hospitality or communal environments, the dual-light approach helps create intimacy at the human scale while preserving overall spatial continuity.

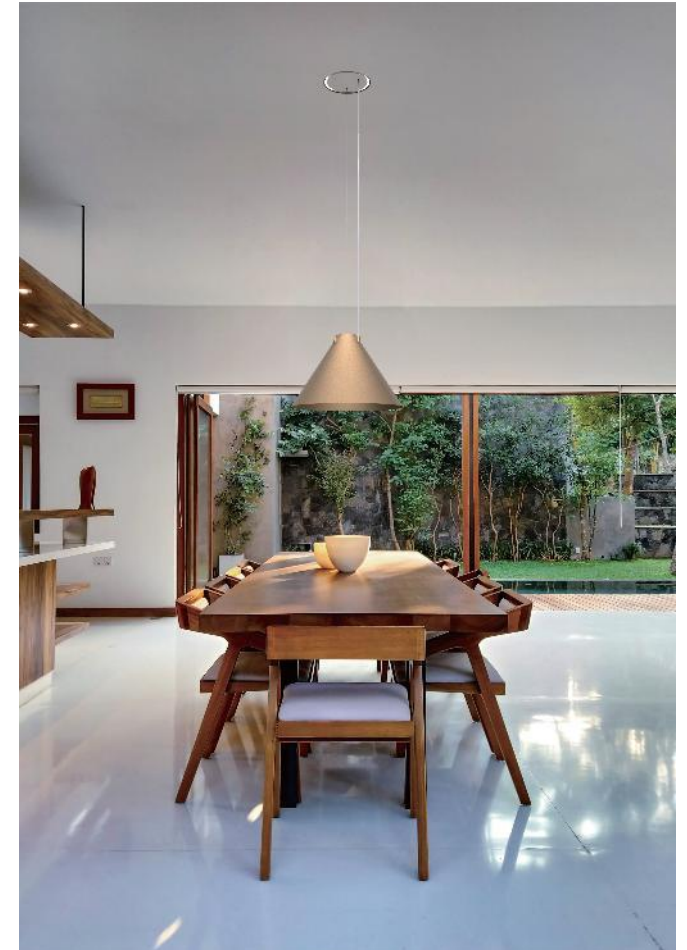

Living Areas

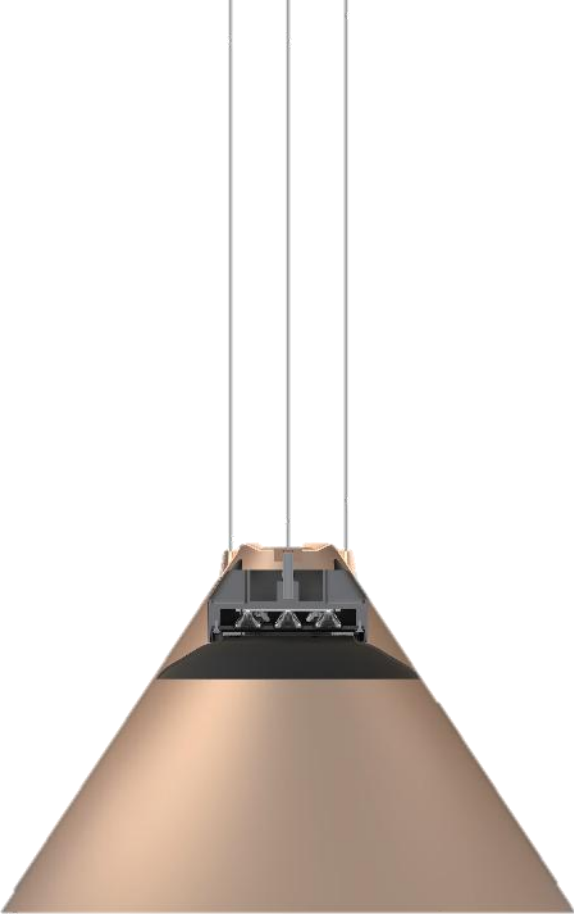

The pendant offers focused light over seating or conversation areas while creating a soft ceiling glow, reducing eye strain during extended use.

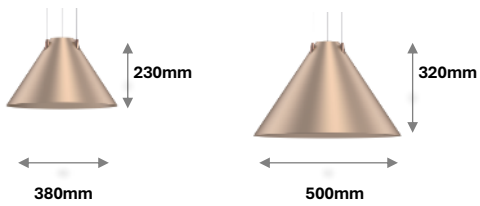

Dining Space

The downward light highlights the dining table and food, while the upward reflection maintains an open, balanced space, avoiding isolation.
